EcoMill and PowerMill series

Proven in practice

HSC machining to the highest perfection

High removal rates, defined surface roughnesses or special requirements on the flatness of the part – irrespective of which requirements are placed on the tool during face milling, the EcoMill and PowerMill series provide the solution. Different numbers of teeth make possible the optimal selection of the tool with the goal of achieving the highest cost-effectiveness for the milling process. Disposable milling cartridges for the series EcoMill or economical 24-hour re-grinding service for the PowerMill design – both variants are available.

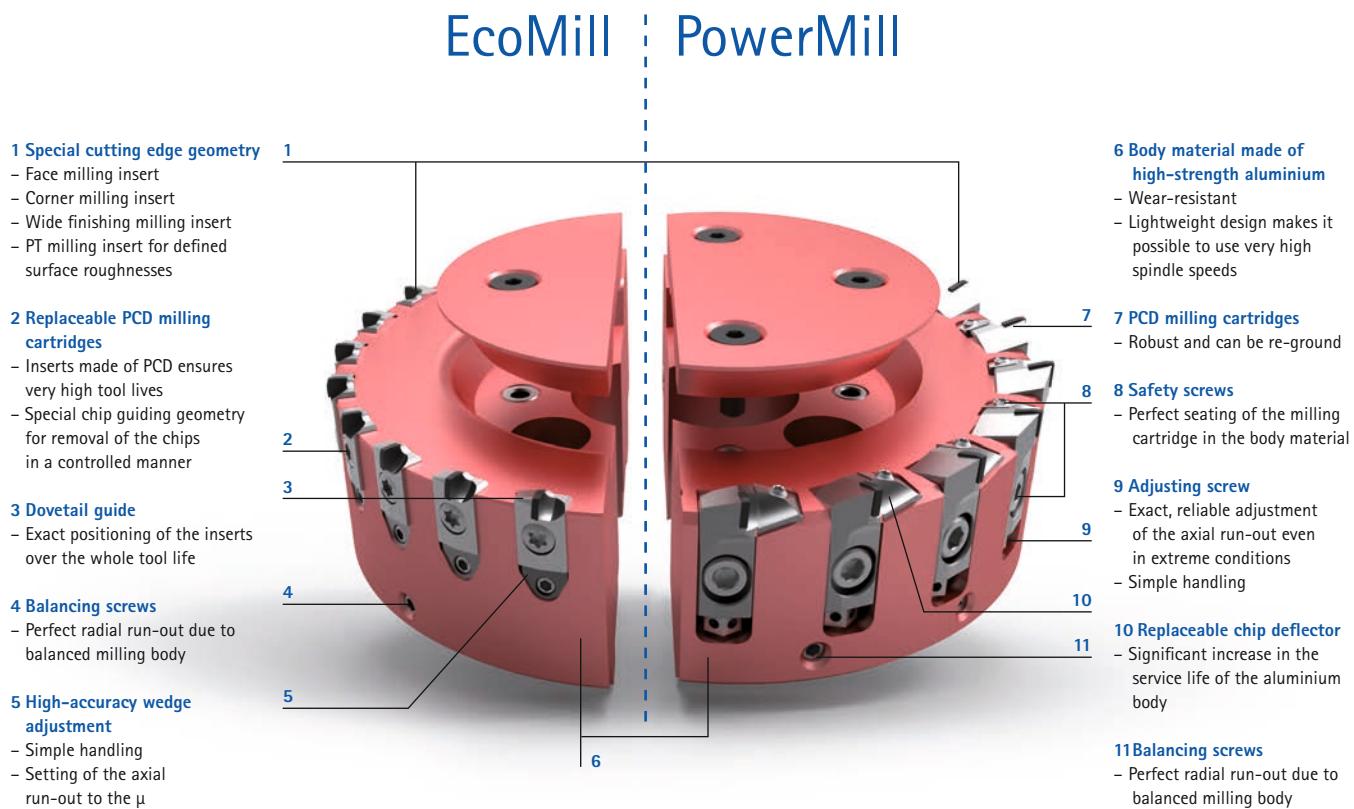

EcoMill

This series includes many innovations. Due to the usage of disposable milling cartridges, the logistics effort is reduced. During handling the simple positioning of the milling insert in the aluminium body impresses. The centrifugal forces that occur during machining are compensated by an exact dovetail guide. Integrated chip deflectors significantly increase the service life of the milling cutter body. Perfect surface finishes are achieved with this milling cutter by the sensitive, effective wedge adjustment of the inserts in the Z direction. The milling head primarily designed for finishing operations impresses due to the very smooth running that is achieved without problems despite the high feed rates.

PowerMill

The parts reduced to a sensible minimum in conjunction with the simple, but robust construction are a guarantor for the uncomplicated and extremely fast adjustment of the tool. The significant difference to the EcoMill series is in the milling cartridge. On the PowerMill series the milling cartridges are designed with larger PCD-tipping. Along with the greater cutting depth of up to max. 5 mm; this feature also makes regrinding possible. The highly accurate milling cartridge guarantees a perfect insert diameter due to the accurate manufacture in the aluminium body.

Tool features in detail

EcoMill

- Light aluminium body
- Particularly sensitive adjustment for finishing operations
- Economical disposable inserts with smaller PCD cutting edges than on the PowerMill series

PowerMill

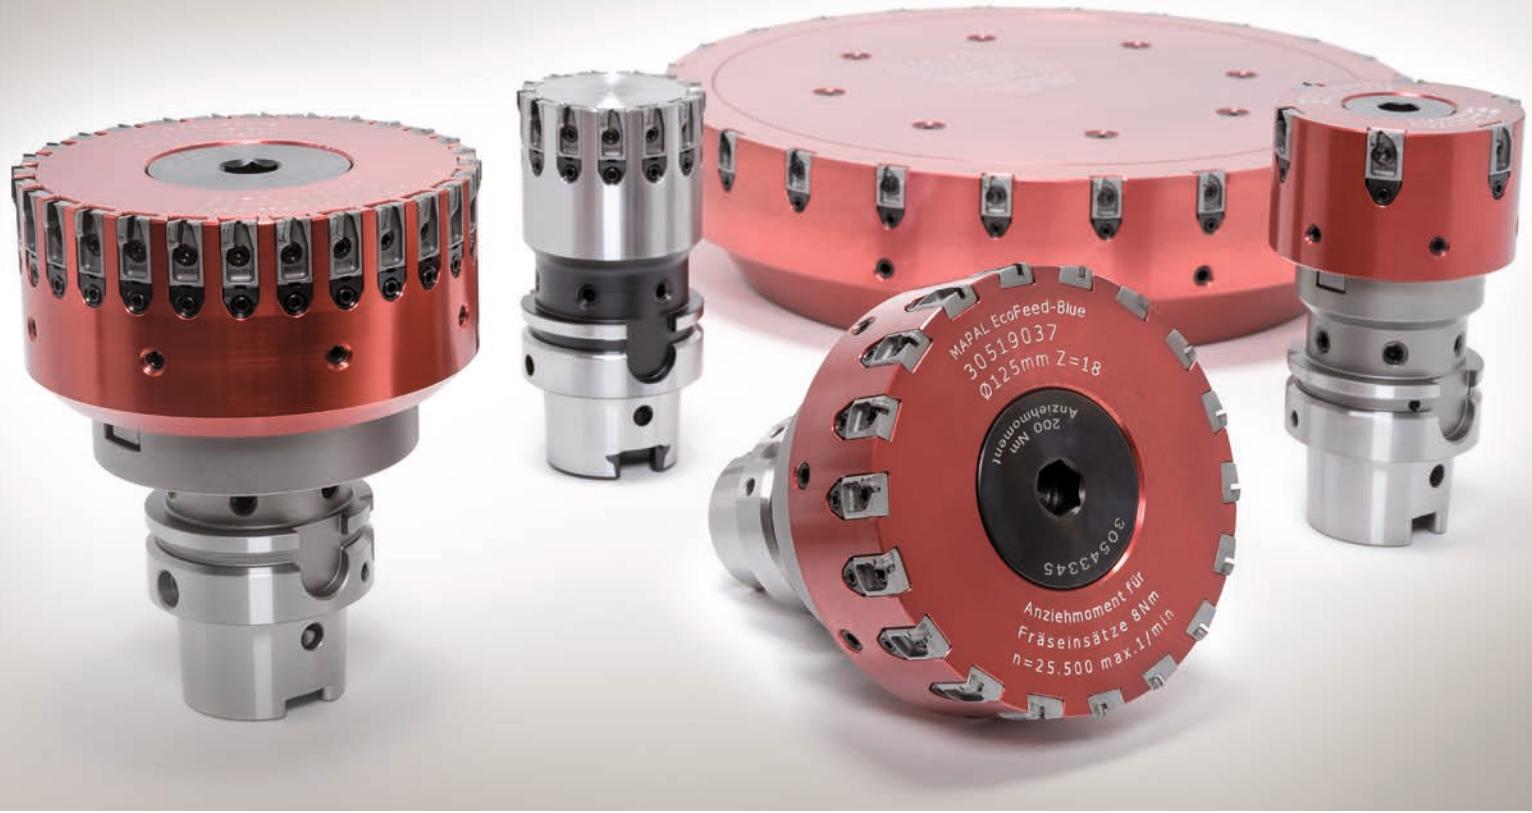

- Simple, robust construction
- Replaceable chip deflectors for extremely long life of the milling body
- Milling cartridges that can be re-ground for high cost-effectiveness
- Basis for customer-specific custom solutions

Custom solutions

- Disc milling cutters for complete machining operations during which face surfaces and spacings are to be produced in one pass
- Beam milling cutters - for machining centres with restricted tool diameter or machining operations that require a large diameter
- Along with the milling heads with custom dimensions, milling cartridges can be adapted to the specific machining task

Comprehensive standard programme for all requirements.

EcoMill-Blue and RapidMill-Blue

New generation of PCD face milling cutters

A clean solution for high-speed aluminium machining

Part cleaning represents a significant cost element in series production. This is where the new generation of PCD face milling cutters comes into its own. To come as close as possible to the goal of a finished part free of residual soiling, an innovative PCD milling cartridge has been developed. The special chip guiding geometry keeps the chips away from the workpiece surface in a controlled manner.

Thanks to the new milling cartridges, a significantly improved visual surface finish is achieved with ductile and long-chipping materials and the risk of score formation has been greatly reduced. This has advantages particularly during dry machining and with minimum quantity lubrication.

The integrated coolant outlets in the milling cartridges ensure optimum cooling and lubrication of the PCD inserts, particularly with minimum quantity lubrication. The significantly reduced effort for the subsequent cleaning of the parts is particularly important for machining processes without the use of cooling lubricants.

The construction is similar to that of the proven EcoMill principle. The cutting edges are implemented in the form of milling cartridges and are securely fixed by a highly precise dovetail guide. Changing the milling cartridges is quite straightforward. Adjustment is user-friendly with radially accessible, wedge-shaped adjusting elements.

With same basic set-up and even more cutting edges ($z=28$ with tool diameter 125 mm) the new RapidMill-Blue series achieves the highest possible productivity during face milling.

As a special service, MAPAL offers milling head management as well as reconditioning in original quality.

Tool features in detail

1 Minimum cutting edge overhang

- Low noise
- Very smooth running

2 Special cutting edge geometry

- Face milling insert
- Corner milling insert
- Wide finishing milling insert
- PT milling insert for defined surface roughnesses

3 Body material made of high-strength aluminium

- Wear-resistant
- Lightweight design makes it possible to use very high spindle speeds

4 High-accuracy wedge adjustment

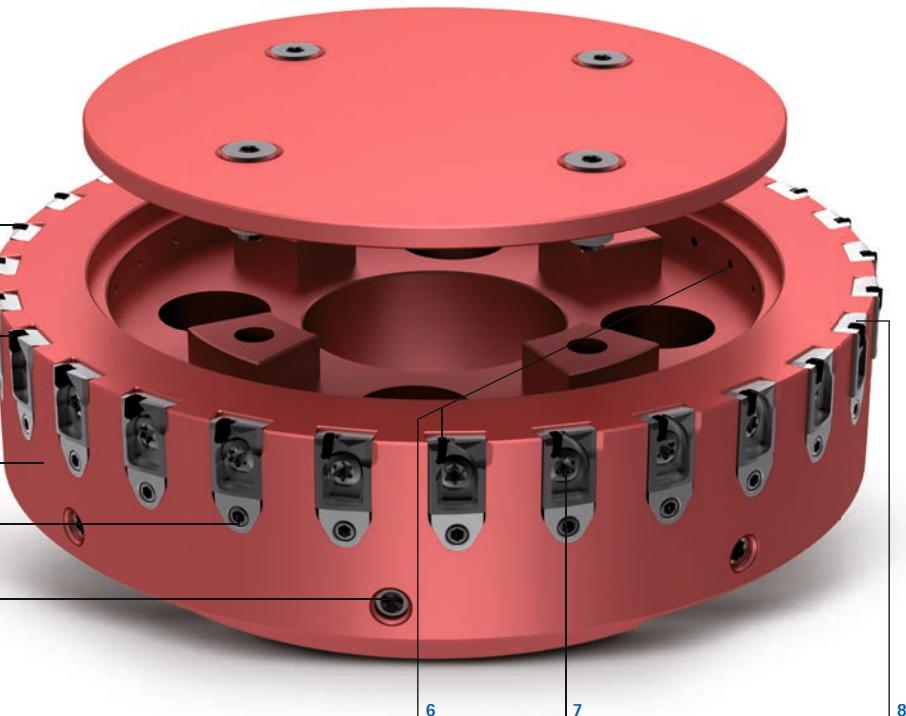

- Simple handling
- Setting of the axial run-out to the μ

5 Balancing screws

- Perfect radial run-out due to balanced milling body

6 Integrated coolant outlets

- Direct cooling and lubrication of the cutting edges
- Suitable for dry machining and MQL applications

7 Replaceable PCD milling cartridges

- Inserts made of PCD for long tool lives
- Special chip guiding geometry for removal of the chips in a controlled manner

8 Dovetail guide

- Exact positioning of the inserts over the whole tool life

Innovative chip guiding geometry

- Significantly better surface finish
- No transport scoring on the part surface as the chips are discharged to the outside
- High process reliability with fewer chips and less residual soiling in the part
- No abrasion of the milling cutter body through the chip discharge

Optimised for MQL machining

- Direct cooling and lubrication of the cutting edges
- Very suitable for dry machining and MQL applications
- Reduced noise level due to minimisation of the cutting edge overhang (0.5 mm)

Economical basic design

- Cutting edges formed as replaceable milling cartridges
- Stable guiding due to highly precise dovetail guide
- High productivity due to maximum number of teeth
- Monoblock variant for increased rigidity

Controlled chip removal for more quality, productivity, process reliability and tool life.

FlyCutter

Lightweight HSC milling cutter for surfaces as smooth as glass

The tool weight plays a decisive role

In a very wide range of sectors, small machines are used to manufacture aluminium housings. These machines have very precise spindles that permit very high spindle speeds. They are not designed for high torques and often have a maximum tool weight of 3 kilograms. Nevertheless the requirements for machines and tools are high. Surfaces as smooth as glass with roughness figures smaller than R_a 0.2 µm and flatnesses with maximum 0.4 mm must be manufactured reliably.

With the FlyCutter, MAPAL has developed a milling tool that is precisely matched to these requirements. The innovative design and the usage of aluminium ensure the milling head

has a particularly low weight. Nevertheless, the system has excellent strength values even at large diameters. All different milling head diameters from 63 to 160 mm can be mounted on the same milling cutter arbor. This aspect also contributes to the low weight of the overall system. With a diameter of 140 millimetres, together with a milling cutter arbor BT 30, the FlyCutter weighs only 1.5 kilograms.

Milling head and milling cutter arbor are finely balanced. The milling head has an additional balance plane to balance the complete system precisely. The milling cutter clamping screw is designed for internal coolant supply.

As a result it is ensured that chips are flushed radially outwards and away from the surface produced, among other things.

The sensitive wedge adjustment makes it possible to adjust the milling cartridges to the μ . The dovetail guide and an additional worm screw ensure perfect seating and accuracy of repetition on the assembly of the milling cartridges. Due to the special, highly positive cutting edge geometry, there are only low forces acting on the part, in this way stress and deformation are avoided.

Tool features in detail

1 High-accuracy wedge adjustment

- Simple handling
- Setting of the axial run-out to the μ

2 Replaceable PCD milling cartridges

- Inserts made of PCD ensures very high tool lives
- Easy handling

3 Balancing screws

- Perfect radial run-out due to balanced milling body
- Additional balance plane to balance the complete system

4 Special cutting edge geometry

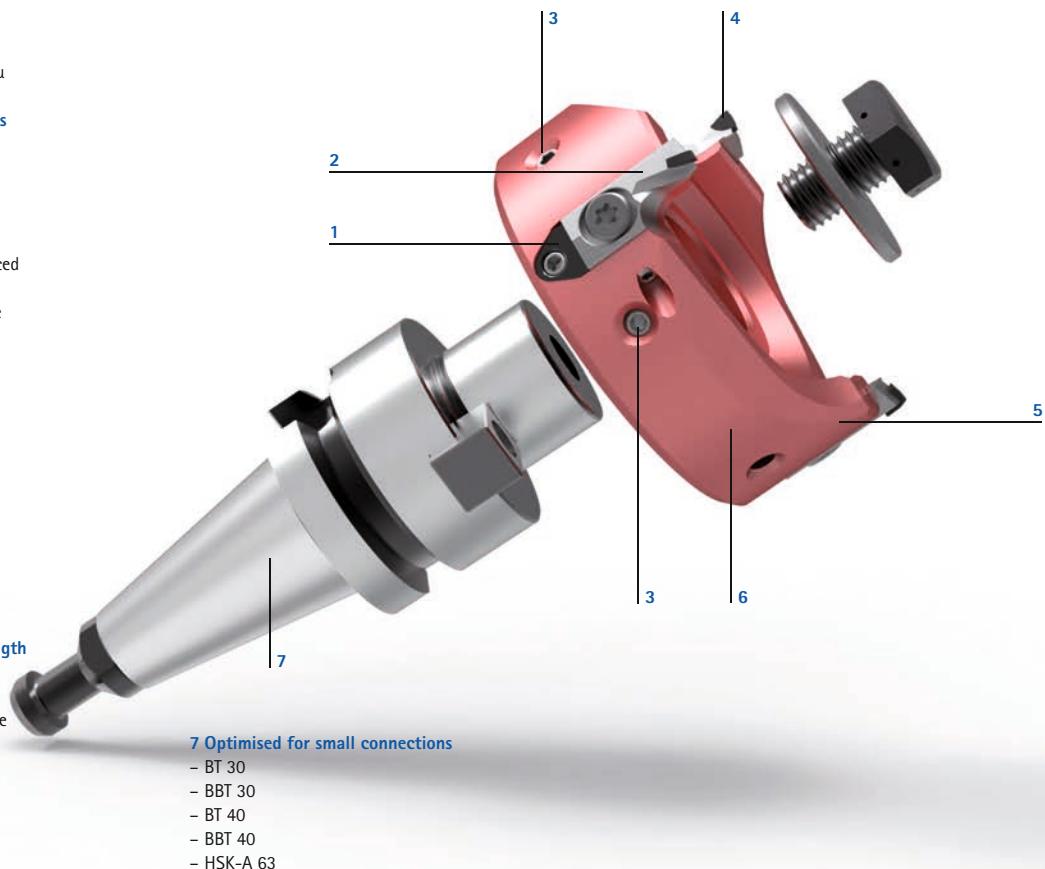

- Face milling insert
- Corner milling insert
- Wide finishing milling insert
- PT milling insert for defined surface roughnesses

5 Dovetail guide

- Exact positioning of the inserts throughout the entire tool life

6 Body material made of high-strength aluminium

- Wear-resistant
- Lightweight design makes it possible to use very high spindle speeds

Perfect surface finishes

- The selection of the PCD milling cartridges is dependent on the part or on the surface to be produced
- Setting of the PCD milling cartridge to the μ
- Additional balance plane to balance the complete system exactly

For small machines

- Stress-free machining of the part due to highly positive cutting edge geometry
- Specially developed for very soft, long-chipping aluminium
- Suitable for machining of vacuum-clamped, thin-walled parts

Modular construction

- Simple, robust construction
- All milling head diameters from 63 to 160 mm can be mounted on the same milling cutter arbor
- Milling cutter clamping screw designed for internal coolant supply

Optimal for usage in BT 30 spindles.

MAPAL Maintenance Services – reconditioning for face milling heads

Significant cost savings through reliable, quick and precise reconditioning

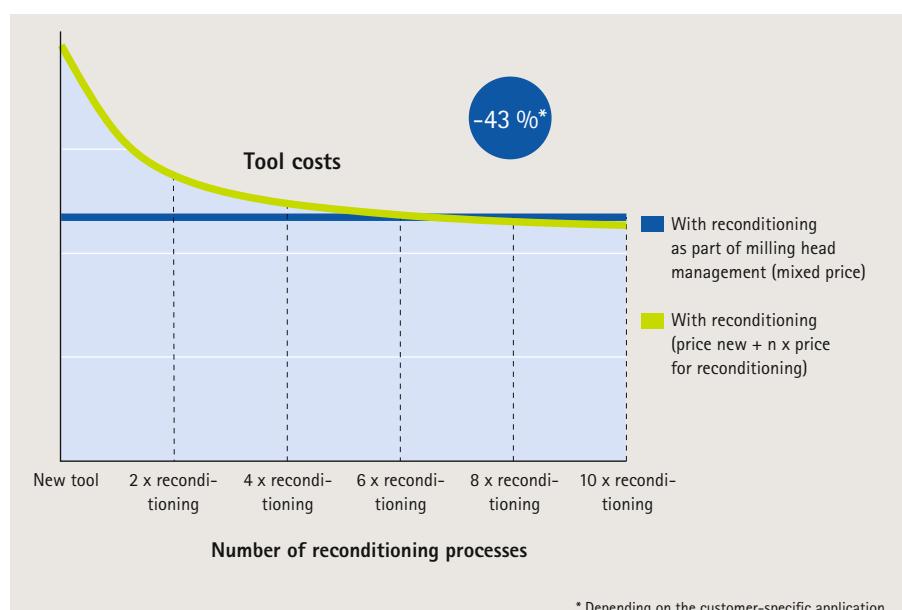

During machining, customers must be able to rely on their tools over the entire process, particularly after reconditioning. Cleanliness, care and precision are for MAPAL the essential factors in the foreground during the reconditioning of the milling heads. With reconditioning in original quality and milling head management, MAPAL offers two

reconditioning systems for face milling heads that guarantee precise, reliable tools with full performance. With each reconditioning the service life of the tools is significantly increased and costs for new tools saved. The customer receives tools that can be used immediately for the trouble-free achievement of the already familiar tool lives. The tools are

collected from and delivered to the customer by courier. The standardised process ensures straightforward, fast processing within a few days.

ADVANTAGES

- Increase in the tool life
- Reduction of the tool costs
- Tools in original quality ready for use
- Punctual collection and delivery
- Increase in the process reliability
- Reduction of capital tied-up*

* In conjunction with milling head management

* Depending on the customer-specific application

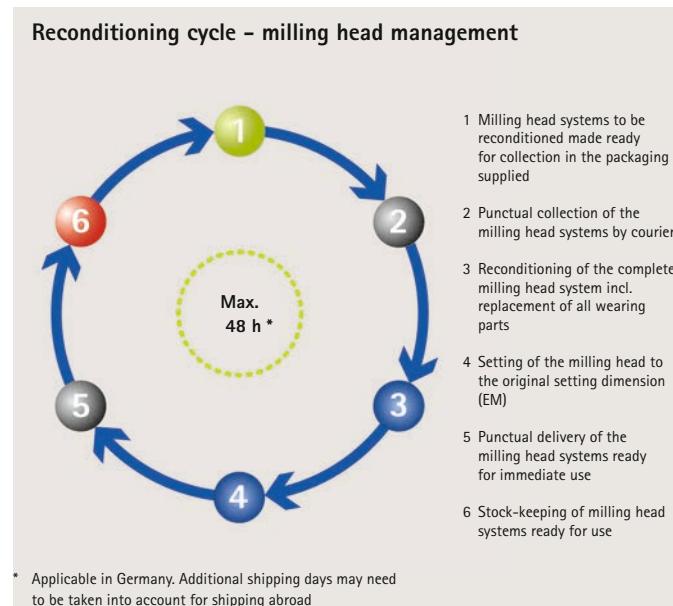

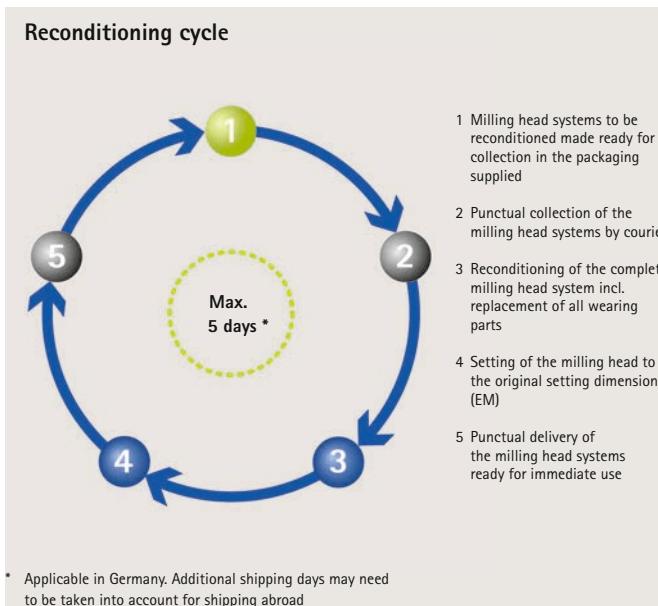

Reconditioning in original quality

At MAPAL, after disassembly, the tools are thoroughly cleaned, wearing parts replaced and the system re-assembled from the ground up. Worn milling cartridges are submitted to a repair cycle. The tool is equipped with new, reconditioned inserts from stock. After assembly with the related milling cutter holder, the milling cartridges are set to the original setting dimension. Within five days, the customer receives tools that can be used immediately for the trouble-free achievement of the already familiar tool lives.

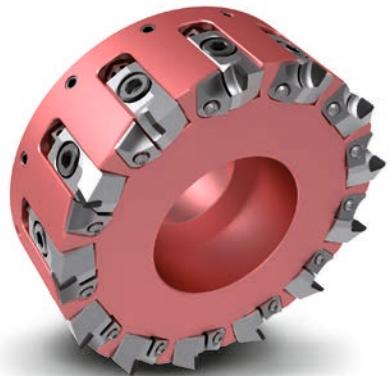

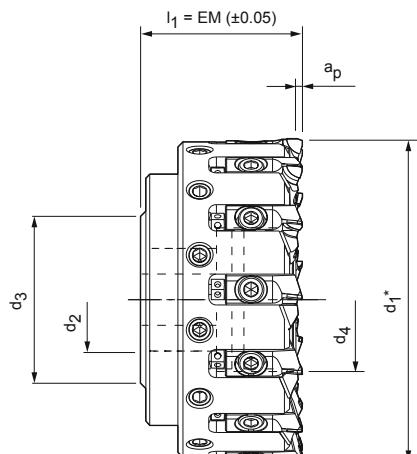

Milling head management

The milling head management includes, along with reconditioning in original quality, also stock-keeping. Customer profit from 24-hour tool availability at the place of use as well as less capital tied-up. Charging is at a calculated mixed price on withdrawal. The customer has full control of the costs. Expensive procurement costs for new tools are not incurred. Bottlenecks due to tool availability are a thing of the past. By means of a customer agreement, a fixed procedure is defined that makes possible delivery times of maximum 48 hours.

SHM58/59

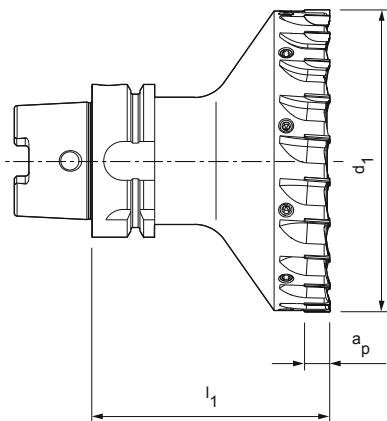

Design:

Milling cutter diameter: 40.00-125.00 mm
Cutting material: PU611
Number of cutting edges: 10-22
Helix angle: 4°

Application:

For face milling, especially with high stock removal. For cutting depths of up to 8 mm.

SHM58: Surface quality $R_z \leq 10 \mu\text{m}$
SHM59: Surface quality $R_z > 10 \mu\text{m}$

CUSTOM SOLUTIONS

PCD – custom tools for face milling and circular milling

As an addition to the standard series, custom solutions for PCD milling tools are also often produced at MAPAL for a special application. The latest manufacturing technologies, for example finish lasering, make it possible to solve highly demanding machining tasks. In this way tool solutions with complex cutting geometries and extreme rake and helix angles can be reliably and reproducibly manufactured to suit the manufacturing task.

Particularly during milling, the advantages of the cutting material diamond can be used optimally. The extreme hardness of the diamond insert in conjunction with the highly polished rake face ensure low forces on shearing off the chip and reduce the heat introduced to the workpiece during movement. These are optimal prerequisites for the highest machining qualities for dimension, surface finish and shape, with outstanding productivity and the highest tool lives, as well as optimal process reliability.

Application examples for customer milling cutters

- 1 Face milling cutter for cylinder head machining, combustion chamber side, varying radial arrangement of the PCD inserts for low-burr surface
- 2 Circular milling cutter for machining the connection side of a fuel nozzle
- 3 Along with the milling heads with custom dimensions, milling cartridges can also be adapted to the specific machining task
- 4 Disc milling cutter for face milling camshaft bearing pillars
- 5 Chamfer milling cutter with CFS connection
- 6 Circular milling cutter for machining on a stabilising frame for aircraft lifting system

- 7 Circular milling cutter for machining on a stabilising frame for aircraft lifting system
- 8 Face milling cutter for machining on a brake caliper, reverse milling at the face surface for the main bore
- 9 Combination milling cutter for machining on a gearbox housing
- 10 Face milling cutter for double-sided machining on a bearing frame in one clamping system
- 11 Milling cutter for external machining of turbocharger hose connection
- 12 Circular milling cutter for machining on a throttle flap housing

Milling cartridge wide finishing milling insert

	6	< 5	3	Right	PU611	EMC-811-0-PU611	30696625
	0	< 3	3	Right	PU611	EMC-831-0-PU611	30696627

Milling cartridge PT milling insert

	0	≤ 5	3	Right	PU611	EMC-931-0-PU611	30696631
---	---	----------	---	-------	-------	-----------------	----------

Dimensions in mm.

Milling cartridges FMC

Milling cartridge face milling inserts

	Rake angle γ [°]	R_z value [μm]	a_p max.	Running direction	Cutting material	Specification	Order No.
	15	≤ 5	3	Right	PU611	FMC-751-0-PU611	30410278-300
	15	> 20	3	Right	PU611	FMC-754-0-PU611	30410278-302

Milling cartridge corner milling insert

	15	≤ 10	3	Right	PU611	FMC-652-0-PU611	30410278-303
--	----	-----------	---	-------	-------	-----------------	--------------

Milling cartridge wide finishing milling insert

	10	≤ 5	3	Right	PU611	FMC-841-0-PU611	30410278-301
--	----	----------	---	-------	-------	-----------------	--------------

Dimensions in mm.

Milling cartridges EBC

Milling cartridge face milling inserts

	Rake angle γ [°]	R_z value [μm]	a_p max.	Running direction	Cutting material	Specification	Order No.
	0	≤ 5	2	Right	PKD	EBC-731-0-PU611	30559589
	0	≤ 10	2	Right	PKD	EBC-732-0-PU611	30559591
	0	≤ 20	2	Right	PKD	EBC-733-0-PU611	30559595
	0	> 20	2	Right	PKD	EBC-734-0-PU611	30559599
	6	≤ 5	2	Right	PKD	EBC-711-0-PU611	30502818
	6	≤ 10	2	Right	PKD	EBC-712-0-PU611	30559592
	6	≤ 20	2	Right	PKD	EBC-713-0-PU611	30559596
	6	> 20	2	Right	PKD	EBC-714-0-PU611	30559600

Milling cartridge corner milling insert

	0	≤ 5	2	Right	PKD	EBC-631-0-PU611	30559590
	0	≤ 10	2	Right	PKD	EBC-632-0-PU611	30559593
